## Background and Content

China International Steel Congress is a high-level conference focusing on the profound, overall and strategic issues of development of the steel industry. Since its establishment in 2000, the congress has been successfully held for thirteen times and enjoys an esteemed reputation globally. The main conference of the 13th China International Steel Congress, which was held in last year, attracted more than 1,000 representatives from over 300 enterprises, including 286 international delegates from 58 overseas companies. In addition to the main conference, 18 specialized sessions were organized, focusing on the coordinated development and win-win cooperation of the steel industry chain. These sessions covered multiple dimensions such as "Steel + Construction," "Steel + Iron Ore," "Steel + Automotive," with more than 3,000 industry elites in attendance.

Themed "Technology Empowerment · New Quality Future", the Congress will focus on two major development themes: intelligent manufacturing and green, low-carbon development. It aims to explore how innovation can drive high-quality development and accelerate the cultivation and development of new-quality productivity in the steel industry, thereby promoting the industry's high-quality development and the construction of a modern industrial system.
